

Our Stain

State of the art nanotechnology breaks the molecular make-up of the top coat stain layer into tiny nano (one billionth of a meter) particles to form a tighter film.

- 3 Part Low VOC water-based spray applied stain designed for outdoor applications.
- Factory applied finish at the component stage, before installation of hardware and glass provides superior product and envelope coverage.
- Environment friendly: Low VOC content without harmful off-gasses.
- Superior transparency and resistance to surface degradation.
- Available in both 5 degree gloss and 25 degree gloss finishes (Dynamic recommends the use of 25 degree gloss for exterior applications).
- Resistance to moisture, which can reduce algae and fungal growths.
- Top coat includes nanotechnology for added durability. The improved characteristics of the nano topcoat film results in a harder, more resistant surface while not compromising transparency.
